AI Agent Engineer and Full-Stack Developer, 3+ years building production systems, now building the AI agents that automate them

Experience

RDE Systems | Full Stack Developer

January 2023 - Present

- Designed and built data-entry screens, reports, and migration scripts for an HIV/AIDS electronic medical records platform, becoming the subject-matter expert on one core application across four separate framework migrations.
- Built an AI agent that audits code against WCAG rules and generates per-file SVN patch files, cutting a ~50-hour-per-system compliance process across 50+ systems down to under an hour per system, with human approval required before merge.
- Built a second AI agent that encodes the codebase's unwritten SQL conventions, cutting routine script time in half and complex schema-design work by a similar margin.
- Proposed and built the company's first MCP server to automate a 50-hour manual PDF-to-import workflow, adding feasibility-scoring and schema-validation tooling on top.
- Architected a reusable, scalable CSS system to modernize a 30-year-old product UI with no dedicated frontend or design team, folding ADA compliance into the same rebuild and demoing it to engineering leadership.
- Selected and mentored a 5-developer university capstone team at a company-represented event, hiring one developer into a junior role and continuing to mentor him a year into the job.
- Built and improved the RDE onboarding program, cutting ramp-up time for four new developers joining the framework.

The Coder School | Programming Tutor

September 2021 - July 2023

- Designed and taught a project-based curriculum in React JS, Python, and Java, giving students hands-on experience completing multiple real projects per month.
- Tracked progress across 20+ students with regular parent feedback; students averaged a 30% improvement in programming skills by internal metrics.

MetroStar | Frontend Developer Intern

June 2022 - August 2022

- Designed and built interactive Tableau dashboards using U.S. Census data, giving city planners and officials in Bloomington, Indiana a faster way to identify economic and urban development opportunities.
- Converted Tableau's JS API into reusable React components, cutting dashboard integration time for new use cases across the team.
- Built a standalone React app for testing API endpoints, shortening the bug-identification cycle during development.

Education

New Jersey Institute of Technology | B.S Computer Science

May 2023

Certifications

AI Fluency: Framework & Foundations | Anthropic

April 2026

Teaching AI Fluency | Anthropic

April 2026

Skills

Programming Languages: ColdFusion, SQL, PHP, Python, JavaScript

AI/Agentic Development: Prompt Engineering, Anthropic Claude, GitHub Copilot, MCP, System Architecture

Tools/Frameworks: React JS, jQuery, SQL Server, Tableau, Figma, Tailwind CSS, Bootstrap, Git
